

FROM SEED TO YIELD.

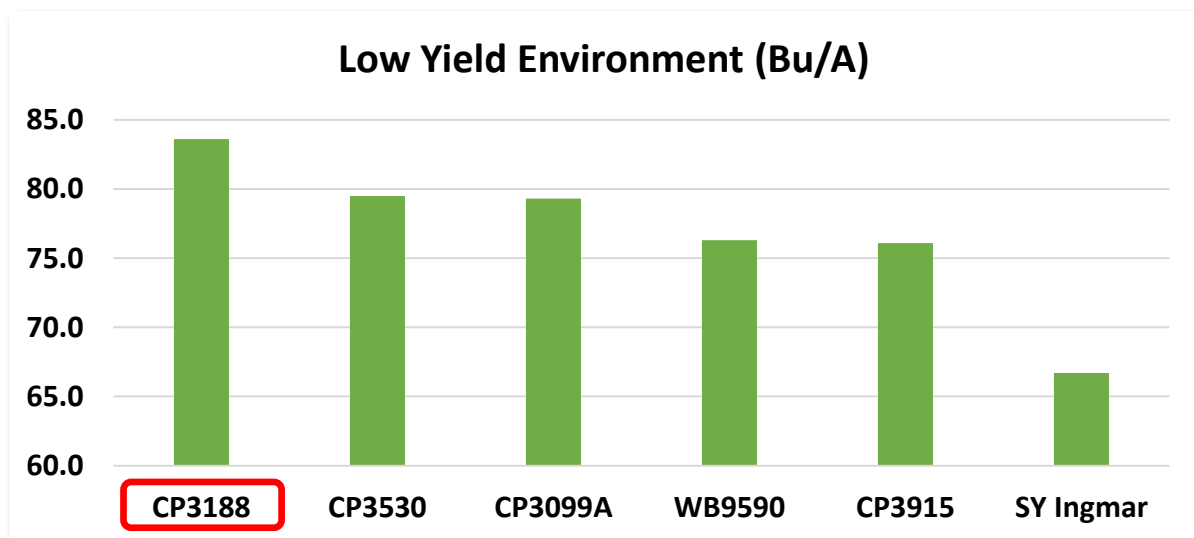

Insights from the week of: November 30, 2020

CP3188

- CP3188 is a very high-yield potential product with excellent performance under stressed conditions (low N, drought)
 - It out-yielded the mean of the trial by 112% on tough acres, higher than all the commercial checks
- When comparing performance across all yield environments, it out-yielded all commercial checks in 2020 by an average of 7 bu/A
- This product carries a low RTP – keeping populations 1.3 or below maintains yield and standability potential
- Acceptable protein, but protein/A is higher than average and protein levels remain constant, even under higher yields and lower N levels

2020 Answer Plot® Data

2020 Answer Plot Data: Hannaford, ND; Fessenden, ND; Bismarck, ND; New Salem, ND; Berthold, ND

Crop performance depends on many factors beyond the control of WinField United, including without limitation, rainfall, temperature, soil type, crop production patterns or unforeseen disease pressure. Answer Plot, CROPLAN, WinField, and WinPak are trademarks of WinField United. The Roundup Ready 2 Xtend® traits may be protected under numerous United States patents. It is unlawful to keep CROPLAN®, Roundup Ready 2 Yield® or Roundup Ready 2 Xtend® soybeans for planting or transfer to others for use as a planting seed. Asgrow®, Channel®, Droughtgard®, Roundup Ready 2 Xtend®, VT Double Pro®, RIB Complete® and Smartstax® are trademarks used under license from Bayer Group. Pioneer is a registered trademark of DuPont. All other trademarks are the property of their respective owners.

FROM SEED TO YIELD.

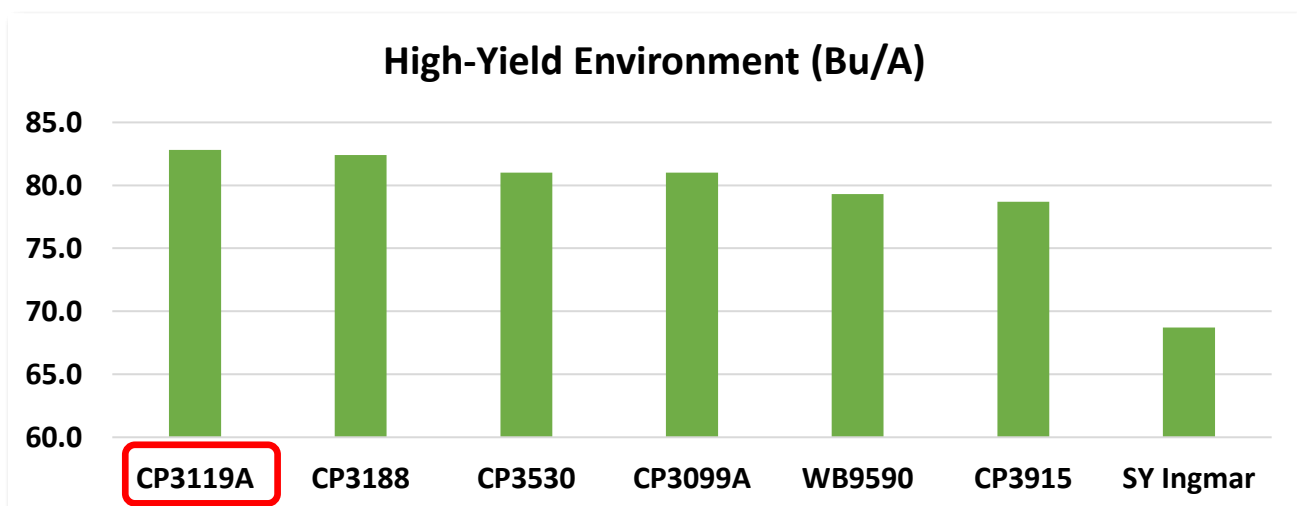

CP3119A

- CP3119A is a European style, full-season awnless product with very high yield potential – highest yielding product in 2020 Answer Plot trials (110% of mean)
- Very large, healthy plant with good standability and incredibly large flag leaf, bigger than CP3099A
- High yielding, lower protein variety, but can increase protein/acre significantly with N management – High RTN score, highest ROI of the lineup
- Extended-season wheat allows for a bigger “factory” and longer grain-fill resulting in higher yield potential
