## Supplemental Molybdenum Seed Treatment

Enhance the value of your fungicide and/or insecticide seed treatment by adding molybdenum with 10% Moly Liquid seed treatment. It is recommended for any seed where molybdenum is deficient or the addition of molybdenum could help improve performance.

### FEATURES AND BENEFITS

- Can help speed absorption of the protective active ingredients in seed treatments to improve ability to fend off major diseases
- Can be mixed with any water-soluble seed treatment
- Offers the greatest benefit when planting into acidic soils (pH<7.0)

### Easy Application

10% Moly Liquid is compatible with any water-soluble seed treatment, including fungicides and insecticides. The seed company, seed conditioner, retailer or grower may apply 10% Moly Liquid seed treatment along with desired seed treatment (like Warden® RTA fungicide or Warden® CX fungicide + insecticide seed treatments) in bulk soybean operations.

10% Moly Liquid seed treatment is formulated to complement on-site seed treating. Mix with seed treatments before applying with mechanical slurry or mist-type equipment for best results.
