Helps Correct Calcium Deficiencies

Calcium plays a vital role in growth and development. A timely application of Quick Cal 12% can provide plants with needed calcium to help improve plant health and increase yields.

FEATURES AND BENEFITS

- Helps prevent calcium-deficiency-related maladies including:
 - Bitter pit in apples.
 - Blossom end rot in peppers and tomatoes.
 - Internal brown spot in potatoes.
 - Blackheart in celery.
 - Cavity spot in carrots.
 - Internal tip burn in cabbage.
- Can be applied to many different crops, and multiple applications are allowed in-season.
- Mixes easily with many pesticides and adjuvants, though a jar test is always recommended for new tank mixes.

Role of Calcium

Calcium is a secondary nutrient required for cell wall structure in plants. It is also involved in cell elongation and division. When calcium is deficient, new tissue can suffer from distortion, and terminal buds and crop roots may fail to develop.

Quick Cal 12% Can Help

Since calcium is immobile in plants, a foliar application of Quick Cal 12% should cover young terminal growth to help plants combat deficiency.

 **REGION**
All

 **USE RATE†**
Most crops: 2-4 quarts/A

 **APPLICATION GUIDE†**
Multiple applications allowed
Many labeled crops

 **ACTIVE INGREDIENTS†**
12.0%: Water soluble calcium

 **PACKAGING**
2 x 2.5 – gallon jugs
250 – gallon mini bulk
