

# Voyagro™

By WINFIELD UNITED

## Foliar Stress Reduction

Voyagro™ biostimulant fertilizer links potassium with amino acids and peptides to aid in the movement of product within the plant. Voyagro™ biostimulant fertilizer helps drive yield potential on highly managed corn with less-than-adequate rainfall.

### FEATURES AND BENEFITS

- Proline accumulates in plant cells to help mitigate abiotic stresses like drought
- Glutamic acid is the precursor of GABA, produced in response to metabolic disruptions to help plants overcome stress

### Voyagro™ Use

Apply to corn where tissue nitrogen and potassium are adequate and there is moisture stress prior to application, or if moisture stress is predicted.

### National Data

In 2014, Voyagro™ biostimulant fertilizer was tested on corn at 20 Winfield® United product development sites.

Treatment @ V5	Average Yield (bu/A)
Check	211.94
Voyagro™	217.17 <b>+ 5.23 bu/A</b>

### Grower Results

6 grower trials were conducted in South Dakota in 2016:

**REGION**  
All

**USE RATE†**  
Corn: 8-16 fl oz/A

**APPLICATION GUIDE†**  
Corn: Foliar V4 to V8, when fertility is adequate and available moisture is low

**ACTIVE INGREDIENTS†**  
4.0%: Nitrogen from amino acids  
16.0%: Soluble Potash (K<sub>2</sub>O)

**PACKAGING**  
2 x 2.5 – gallon jugs

† Always read and follow product labels directions.
