

Downdraft®

By WINFIELD
UNITED

Reduces Fines, Delivers More Product to the Target

A drift reduction agent that increases spray deposition by penetrating the canopy and delivering more droplets to the target.

Downdraft® adjuvant is a droplet management adjuvant that is integrated with a drift reduction agent that allows for increased spray deposition for deeper canopy penetration. Downdraft® adjuvant helps deliver increased coverage by improving droplet uniformity and adhering product to the targeted leaf surface. This deposition aid minimizes spray drift and reduces droplet evaporation, all equating to a higher performing potential for your crop protection program and yield potential in the field.

FEATURES AND BENEFITS

- Delivers greater, more uniform fungicide droplets that can drive deeper into the canopy and onto more leaves, for increased disease protection and improved performance.
- Contains multi-functioning technologies that can eliminate the use of multiple adjuvants, equating to increased yield potential and profit opportunities when integrated into a spray management plan.
- Versatile and works effectively with a combination of herbicides and insecticides, from water soluble to granules.
- Approved by the Council of Producers & Distributors of Agrotechnology Adjuvant Certification Committee.

USE RATE†

Fungicides, herbicides, insecticides, and harvest aids; 4 to 6 ounces/acre.

ACTIVE INGREDIENTS†

Phytobland paraffinic oil, modified vegetable oil, fatty acids, alkyl and alkylaryl ethoxylates 100%

PACKAGING

2 x 2.5 gal.
120 gal.
125 gal. – One way totes
250 gal.
265 gal. – One-way totes
