

RydeRed™

By WINFIELD UNITED

Designed to meet the demand for a reduced-slurry additive for soybeans and cereals, RydeRed™ polymer plus colorant delivers improved flowability, plantability and dust control.

FEATURES AND BENEFITS

- Water-based polymer system in one package with a low use rate
- Improved flowability by 20% when compared to the leading industry competitor*
- Reduced dust-off by 95% when compared to the untreated check*

Effect on Germination

In studies done at the Winfield United product development laboratory, using Warden® CX or Warden® RTA with and without RydeRed™ polymer plus colorant showed improved germination over the untreated check. Germination was not negatively affected.

Color Enhancement

USE RATE†

Soybeans: 0.8-1.6 fl oz/cwt
Wheat: 1.0-2.0 fl oz/cwt

APPLICATION GUIDE†

For use with a seed treatment prior to planting

PACKAGING

2 x 2.5 – gallon jugs
30 – gallon totes

Effect on Plantability

The Winfield United product development team determined RydeRed™ colorant plus polymer used with Warden® soybean seed treatment was net neutral in plantability.
